Title: The Medical Profession is Ageist | Joe Rogan and David Sinclair

- Table 1: Summary of the results per comment;
- [Table 2](#): Summary of the results per sociolinguistic variable;

Table 1: Summary of the results per comment

Comment	KeyWords	Sociolinguistic variables (Hiper - Hipo)	Hate Speech Frequency	Hate Speech Fre-quency(%)
Im 18 and I got a menisectomy right after I turned 17 and it was a terrible decision. After a year it started to hurt again after no physical strain and now I'm back at square one with 20 less of my right lateral meniscus. Moral of the story is to get opinions from multiple doctors , and avoid letting them cut pieces out of you if possible.	doctors	Nationality - General	1/67	1.493
Doctors have that ageist mentality because there are certain physiological changes that happen as you get older which makes some diseases more likely than others so that is why medicine seems to be ageist , because some diseases actually happened to be ageist and using that experience and common trends (albeit doesn't help in individual cases such as this man) do work for the majority and save on money for tests etc (medical professionals are also businessmen with a budget) However I do agree that age is improving and 50 is young because life expectancy is massively improving, so the mentality for doing more drastic approaches should have a higher cut off, however this will be a developmental change over time over generations it can't happen so quickly	Age, Ageist, Common, doctors	Age - General, Nationality - General, Social Class - Working class	6/127	4.724
I like how at 5:50 he says "once your body deteriorates it's hard to bring it back" but right before then he criticizes doctors who discourage older people from getting work done	doctors	Nationality - General	1/32	3.125

<p>The medical profession is a scam. Think about it. Every year of my life, and I'm almost 50, the taxpayers of the USA have spent over \$1 billion dollars to research a cure for cancer. And that fails to include all the money raised by these so-called cancer charities as well as various State government taxpayer fleecing operations. So fast forward to when I was 27 and the doctors told me I had cancer. Yes, at 27. Uncommon but not unheard of. Just ask Dirk Benedict. So they prescribed me a certain toxic synthetic drug, which I never got filled, and I went to two other specialists who gave me the same exact course of action including that same prescription which I never got filled. To be clear, they prescribed me with let's just call it drug C. I was supposed to take it until the prescription ran out. If I was still having problems, I would be prescribed drug B and rinse and repeat. If I was still having problems I was supposed to be prescribed drug A and rinse and repeat. If I was still having problems I was supposed to be immediately scheduled for surgery. Then I started doing some research on cancer and found out that there are hundreds of thousands of people who are living today (this was 1997) precisely because they learned to heal themselves and to refuse to listen to the invasive surgical and toxic synthetic drug advice that so called Doctors like to peddle. Long story short. I learned how to heal myself naturally and never went back to see those scamming doctors again until about a year later when I had them give me a seal of approval for being cancer free. That experience gave me a completely different perspective than the malarkey that Doctors are professionals and that they are educated.</p>	doctors	Nationality - General	4/311	1.286
<p>Of course it's ageist. Doctors don't want to work with people that they can't fix, which is what geriatrics is.</p>	Ageist, doctors	Age - General, Nationality - General	2/20	10.0
<p>Older bodies do not rebound as fast as young bodies, hence why doctors are hesitant to do invasive procedures on older patients. If you want something done, I'm positive you will find a doctor willing to do it. I am an ortho/trauma/neuro and emergency nurse, we make decisions based on the best possible outcome but we respect patient and their families choices, hence , the 99 year old full code who's family wants every single fucking thing done to their two steps from death mother. Also why we allow family in the room during CPR, let them see what we're doing to keep their skeleton of a family member alive</p>	Old, doctors	Age - Over 65s, Nationality - General	2/110	1.818

I could never hang around with this dude he would make me go crazy	Crazy	Physical Identity - Physical (and Mental) Impairments	1/14	7.143
Most doctors are clueless. They can't think out of the box. Stupid lazy doctors should not get paid.	doctors	Nationality - General	2/18	11.111
I could not disagree more, if anything in my experience doctors are ageist , but it's against younger people. At least in the UK I find if you go to a doctor with some kind of ailment and you're under 50 they absolutely do not want to know you and brush you off with a "you're young so you probably don't have anything and even if you do you'll more than likely recover on your own, you know, since you're young"	Ageist, doctors	Age - General, Nationality - General	2/80	2.5
Agree with Rogan and Sinclair. Most Dr. they can't thin out the box. Most concerns about lawsuits than patents health.	Thin	Physical Identity - Physical Features	1/20	5.0
Seems more like common sense than ageism .	Ageism, Common	Age - General, Social Class - Working class	2/7	28.571
Doctors are going to have to adapt how they treat patients. It will be a slow process but I know I'm going to go to the first doctor who knows his stuff about anti aging medicine and discuss a treatment plan	doctors	Nationality - General	1/41	2.439
Part of it is because of recovery speed, for instance there is no reason for an 80 year old to get bilateral knee replacement when it would take over 5 years to recover. And on the opposite end of the spectrum they prefer to change lifestyle choices and cut the origin of the problem out rather than treat the symptoms	Old	Age - Over 65s	1/60	1.667
Couldn't be more wrong. Most doctors are type a, exercise, teach themselves what medical school didn't. Most patients want a pill and not a lifestyle intervention.	doctors	Nationality - General	1/26	3.846
What is hard is how few people are compliant with treatment plans after illness and injury. It's hard to do a risky procedures on someone with a fatty liver, chronic inflammation and live a sedentary life.	Fatty	Physical Identity - Physical Features	1/36	2.778
I got WAY better care when I was a younger man. Seems like there's a slow decline as you age ...	Age	Age - General	1/20	5.0

Listen u dumb fucks. I'm a fake doctor (dentist), and our fucking hands are tied when it comes to treatment. Insurance companies run the game. I dont even think about ideal treatment sometimes because patients routinely and consistently decline it due to a fucking 'fixed income'. Guess what ass-wads? EVERYONE IS ON A FIXED INCOME. Also, going to a 4 year, plus dental school, plus buying into a dental practice (or starting your own) gets me easily to over 1 mil in debt. WTF? Also, guess what loan you cant declare bankruptcy on!!!!? Fucking school loans. As I literally am now working two jobs, since being a fucking doctor wasnt paying the loans and bills, I really despise any person that is milking the system. Apparently working hard and attempting to achieve the best fiscally responsible profession for my family's well-being, is no longer enough and I was fucking lied to by the boomers out there. The times have changed, and being on youtube is now your best bet.	Dumb	Physical Identity - Physical (and Mental) Impairments	1/169	0.592
When I was in the army retired Master Sargent age 78 Froze his retirement wanted to get Command Sargent Major before actually retire completely. He joined my unit and during our PT test. We both did 148 push-ups, beat me in sit-ups 103 to my 92 (I take it easy on my situps because of back issues.) One of the fastest runners in my unit. Our runs times 10:03 was my time. I could have easily got it below 9 if I pushed it a little harder. But the Master Sargent's time was 7:38 on the 2-mile run. So I know for a fact. Being old doesn't mean a damn thing physically. He and got along because I was the only one who knew who "The Duke" was. lol which was funny and sad at the same time. I was 27 years old at the time but I was raised old school.	Age, Old	Age - General, Age - Over 65s	4/152	2.632
Michael Dew I made a typo in my reply and corrected it, soooo... what? Geez, nobody try and have fun around this guy, it's like talking to captain literal over here.	Nobody	Age - Youngsters	1/31	3.226
That's not ageist ... That's risk benefit that drs have to deal with because if not they get sued...	Ageist	Age - General	1/18	5.556
Yeah I'm a nurse and everything he said I'm sitting here like '...dude that's not ageist it's common sense'	Ageist, Common	Age - General, Social Class - Working class	2/19	10.526
Remy old people (in general, not necessarily his age , and regarding dentistry I'm not very familiar with, but take this first point in a general sense) take longer to recover from certain things. For instance 99 of ortho doctors won't do a bilateral knee replacement on anyone over 80, because the recovery takes so long and the quality of living will be reduced and it wouldn't be worth it. In terms of his example with statins, generally we try to get patients to change lifestyle choices to eliminate the origin of the problem, instead of just treating the symptoms.	Age, Old, doctors	Age - General, Age - Over 65s, Nationality - General	3/99	3.03

Wrong. Researcher here. While risk is a valid concern, this is nothing more than an excuse that mistakes statistical trends as impinging upon individual situations rather than understanding rote outcome data alone is nothing more than rote outcome data and doesn't imply anything about what direction individual instances will take with further defaulting to baser human laziness that sheds light on the fact that doctors and nurses are far too commonly little more med techs with fancier titles and not scientists willing and able to seek solutions by looking into why a procedure did or didn't take - explains the chapels in hospitals. And most "professionals" are complicit in this, as the nurse demonstrated, often hiding behind " common sense" or worse "best methods" rhetoric unwilling to acknowledge such ideas are rooted in an unwillingness to admit not knowing which option is best, let alone right, due to not having needed data to indicate which actually is best due to, at worst, an unwillingness to obtain that data, so defaulting to the methods that has the highest outcome scores is most sensible when in reality it's not much more than good enough a reason to try that option first.	Common, Nothing, doctors	Age - Youngsters, Nationality - General, Social Class - Working class	4/198	2.02
imlee888i don't get why people are saying 80 years old ? Joe was saying they wouldn't fix his MCL and he's 51. And had a friend in his 50's that the wouldn't replace fix his ACL. I don't think they were complaining about someone who's 80 getting knee replacement. I guess just so you can say they're wrong? You move the goal-post then correct them so you feel smart?	Old	Age - Over 65s	1/69	1.449
Nothing against Mr Sinclair, but he's like that friend you invite to a fishing trip and have to defend from other friends that wish you didn't invite him.	Nothing	Age - Youngsters	1/28	3.571
We love Joe. He inspired us to start a podcast. Let us leach off his greatness. New Podcast about crazy Florida. Please check it out and subscribe please thank u fellow Rogans	Crazy	Physical Identity - Physical (and Mental) Impairments	1/32	3.125

Table 2: Summary of the results per sociolinguistic variable

Sociolinguistic variables (Hiper - Hipo)	KeyWords	Number of occurrences	Frequency	Frequency(%)
Nationality - General	doctors	16	16/2935	0.5499999999999999
Age - General	Age, Ageist, Ageism	12	12/2935	0.41000000000000003
Social Class - Working class	Common	4	4/2935	0.13999999999999999

Age - Over 65s	Old	7	7/2935	0.24
Physical Identity - Physical (and Mental) Impairments	Crazy, Dumb	3	3/2935	0.1
Physical Identity - Physical Features	Thin, Fatty	2	2/2935	0.06999999999999999
Age - Youngsters	Nobody, Nothing	4	4/2935	0.13999999999999999

Result analysis:

- Taking into account the words that were detected, we can reach the conclusion these comments are associated with : : Nationality - General;Age - General;Social Class - Working class;Age - Over 65s;Physical Identity - Physical (and Mental) Impairments;Physical Identity - Physical Features;Age - Youngsters;
- The percentage of hate speech related words is 1.6354.
- Considering that the variable **Nationality - General** has the most occurences in the post, we can interpret that this is the predominant hate speech.
- Overall there were 48/105 occurences of hate speech related comments.
